A responsive Weather Forecast Web App built using HTML, CSS, and JavaScript. It uses the Visual Crossing Weather API to display current weather conditions, hourly and 7-day forecasts, weather highlights, and Celsius/Fahrenheit temperature conversion.

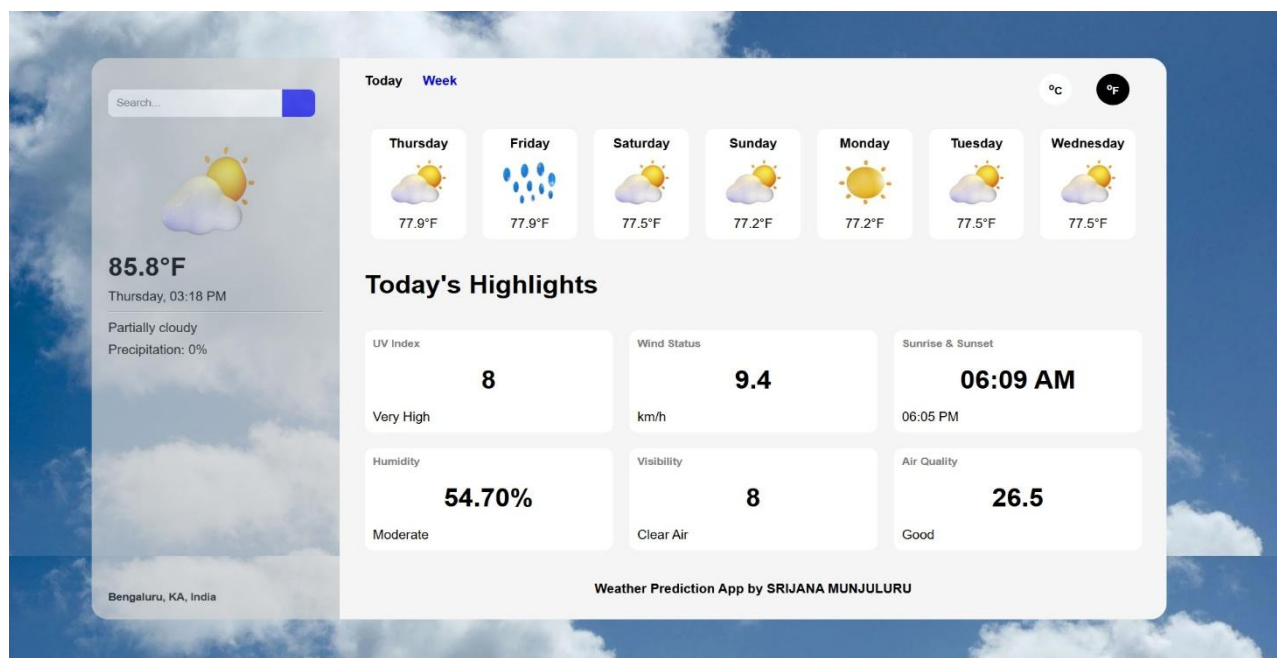

1. Landing page with current location.

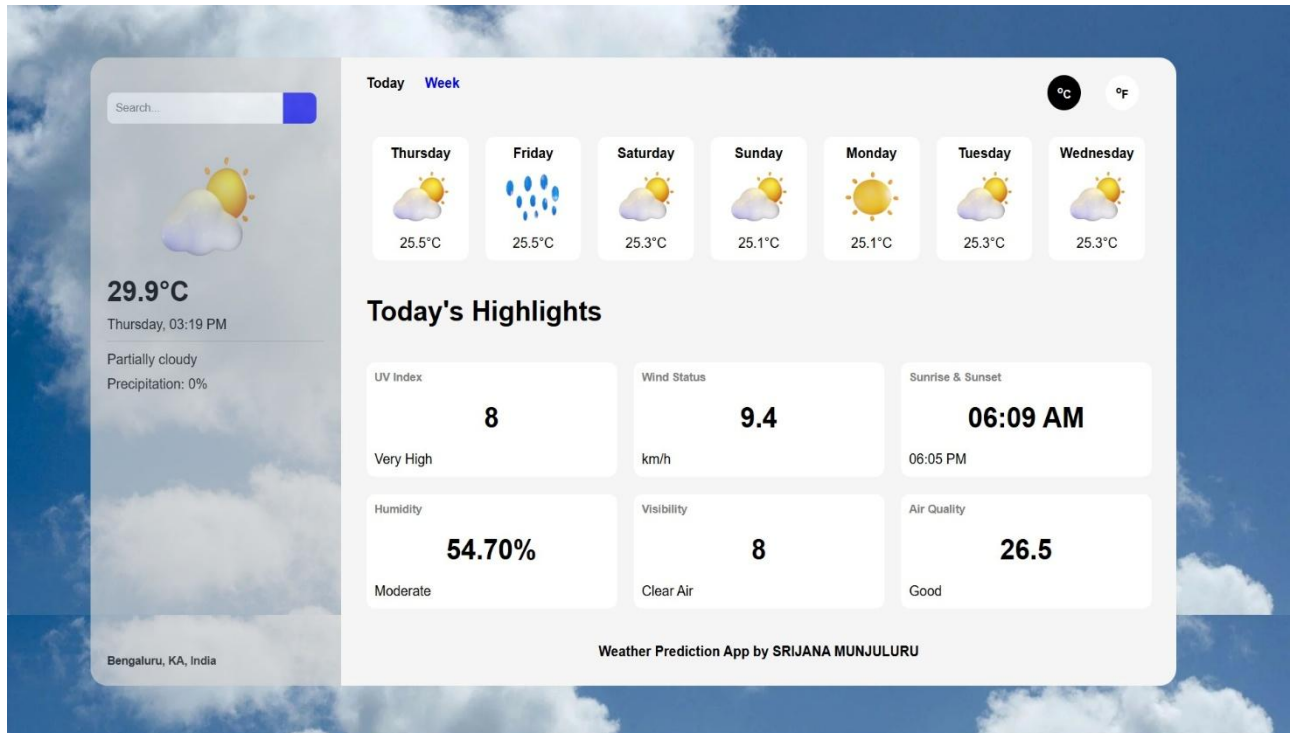

2. Today page showing temperatures in Fahrenheit.

3. Week page showing temperature in Fahrenheit.

4. Week page showing temperature Celsius

5. Searched another city and checked today page, week page in both Celsius and Fahrenheit temperatures.
